

Isaacson Structural Steel, Inc.

PROJECT PROFILE

*Children's Hospital
New Research Building*
Boston, MA

ISSI job number 2-151
Project type: Medical research
Tons of steel: 3079
Owner/ developer: Children's Hospital
Architect: Tsoi/Kobus & Associates
Structural Engineer: McNamara/Salvia, Inc.
Contractor: John Moriarty & Associates
Erector: James F. Stearns

This 20-story, \$130 million New Research Building is located across the street from the John F. Enders Pediatric Research Laboratories building in Boston. The addition of 325,000 sf of space, including 295,000 square feet of new research space allows for the expansion of existing departmental research efforts, as well as the development of six new Multidisciplinary Programs. Isaacson Structural Steel was an integral member of the construction team by providing the supply and erection of structural steel and metal deck.

Steel erection was completed in the fall of 2002.
