Architect: Jung | Brannen Associates, Inc.
Structural Engineer: Weidlinger Associates, Inc.
Contractor: John Moriarty & Associates Inc.
Erector: Universal Steel Erectors

The Residences at Manchester Place is a nine story hi-rise located in downtown Manchester, NH. Its 204 luxury apartments are complemented by a 309 space adjacent parking garage, also fabricated and erected by ISSI. The construction required close coordination with the rest of the project team, since space for staging of structural steel and metal deck was at a premium. This project also specified CanAm Steel's innovative HAMBRO joist system, which was also provided through ISSI.
